INFORMATION SHEET

Bearing Cleanliness

Strict cleanliness is an essential condition for the good operation of all miniature bearings. RMB achieves this perfect cleanliness by

- full temperature control and air filtration of all production departments
- ultrasonic cleaning of all components after different stages of manufacture
- cleaning by specially developed methods, of all component parts before assembly
- the assembly of parts in special **CLEAN ROOMS**, in which the temperature, humidity and dust content of the atmosphere are controlled to precise limits
- strict observation of the rules of cleanliness enforced on all personnel working in these **CLEAN ROOMS**
- the repeated cleaning of finished bearings by processes specially designed and perfected for small bearings
- the use of specially filtered lubricants
- the packing of finished bearings in absolutely clean sachets or tubes hermetically sealed
